## **IFIP – The International Federation for Information Processing**

IFIP was founded in 1960 under the auspices of UNESCO, following the first World Computer Congress held in Paris the previous year. A federation for societies working in information processing, IFIP's aim is two-fold: to support information processing in the countries of its members and to encourage technology transfer to developing nations. As its mission statement clearly states:

*IFIP is the global non-profit federation of societies of ICT professionals that aims at achieving a worldwide professional and socially responsible development and application of information and communication technologies.*

IFIP is a non-profit-making organization, run almost solely by 2500 volunteers. It operates through a number of technical committees and working groups, which organize events and publications. IFIP's events range from large international open conferences to working conferences and local seminars.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is generally smaller and occasionally by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

IFIP distinguishes three types of institutional membership: Country Representative Members, Members at Large, and Associate Members. The type of organization that can apply for membership is a wide variety and includes national or international societies of individual computer scientists/ICT professionals, associations or federations of such societies, government institutions/government related organizations, national or international research institutes or consortia, universities, academies of sciences, companies, national or international associations or federations of companies.

## Preface

The scientific and industrial relevance of the development of sustainable and resilient production systems lies in ensuring future-proof manufacturing and service systems, including their supply chains and logistics networks. “Sustainability” and “Resilience” are essential requirements for competitive manufacturing and service provisioning now and in the future. Industry 4.0 technologies, such as artificial intelligence; decision aid models; additive and hybrid manufacturing; augmented, virtual, and mixed reality; industrial, collaborative, mobile, and software robots; advanced simulations and digital twins; and smart sensors and intelligent industrial networks, are key enablers for building new digital and smart capabilities in emerging cyber-physical production systems in support of more efficient and effective operations planning and control. These allow manufacturers and service providers to explore more sustainable and resilient business and operating models. By making innovative use of the aforementioned technologies and their enabled capabilities, they can pursue the triple bottom line of economic, environmental, and social sustainability. Furthermore, industrial companies will be able to withstand and quickly recover from disruptions that pose threats to their operational continuity. This is in the face of disrupted, complex, turbulent, and uncertain business environments, like the one triggered by the COVID-19 pandemic, or environmental pressures calling for decoupling economic growth from resource use and emissions.

The International Conference on Advances in Production Management Systems 2021 (APMS 2021) in Nantes, France, brought together leading international experts on manufacturing, service, supply, and logistics systems from academia, industry, and government to discuss pressing issues and research opportunities mostly in smart manufacturing and cyber-physical production systems; service systems design, engineering, and management; digital lean operations management; and resilient supply chain management in the Industry 4.0 era, with particular focus on artificial intelligence-enabled solutions.

Under the influence of the COVID-19 pandemic, the event was organised as online conference sessions. A large international panel of experts (497 from 50 countries) reviewed all the submissions (with an average of 3.2 reviews per paper) and selected the best 377 papers (70% of the submitted contributions) to be included in these international conference proceedings. The topics of interest at APMS 2021 included artificial intelligence techniques, decision aid, and new and renewed paradigms for sustainable and resilient production systems at four-wall factory and value chain levels, comprising their associated models, frameworks, methods, tools, and technologies for smart and sustainable manufacturing and service systems, as well as resilient digital supply chains. As usual for the APMS conference, the Program Committee was particularly attentive to the cutting-edge problems in production management and the quality of the papers, especially with regard to the applicability of the contributions to industry and services.

The APMS 2021 conference proceedings are organized into five volumes covering a large spectre of research concerning the global topic of the conference: “Artificial Intelligence for Sustainable and Resilient Production Systems”.

The conference was supported by the International Federation of Information Processing (IFIP), which is celebrating its 60th Anniversary, and was co-organized by the IFIP Working Group 5.7 on Advances in Production Management Systems, IMT Atlantique (Campus Nantes) as well as the Centrale Nantes, University of Nantes, Rennes Business School, and Audecia Business School. It was also supported by three leading journals in the discipline: Production Planning & Control (PPC), the International Journal of Production Research (IJPR), and the International Journal of Product Lifecycle Management (IJPLM).

Special attention has been given to the International Journal of Production Research on the occasion of its 60th Anniversary. Since its foundation in 1961, IJPR has become one of the flagship journals of our profession. It was the first international journal to bring together papers on all aspects of production research: product/process engineering, production system design and management, operations management, and logistics. Many exceptional scientific results have been published in the journal.

We would like to thank all contributing authors for their high-quality work and for their willingness to share their research findings with the APMS community. We are also grateful to the members of the IFIP Working Group 5.7, the Program Committee, and the Scientific Committee, along with the Special Sessions organizers for their support in the organization of the conference program. Concerning the number of papers, special thanks must be given to the local colleagues who managed the reviewing process as well as the preparation of the conference program and proceedings, particularly Hicham Haddou Benderbal and Maria-Isabel Estrepo-Ruiz from IMT Atlantique.

### AI for Resilience in Global Supply Chain Networks in the Context of Pandemic Disruptions

Modelling COVID-19 Ripple Effect and Global Supply Chain Productivity Impacts Using a Reaction-Diffusion Time-Space SIS Model . . . . .	3
<i>Xavier Brusset, Morteza Davari, Aseem Kinra, and Davide La Torre</i>	
A Vector Logistic Dynamical Approach to Epidemic Evolution on Interacting Social-Contact and Production-Capacity Graphs . . . . .	13
<i>Jan Bart Broekaert and Davide La Torre</i>	
Modeling Shock Propagation on Supply Chain Networks: A Stochastic Logistic-Type Approach . . . . .	23
<i>Cinzia Colapinto, Davide La Torre, Iside Rita Laganà, and Danilo Liuzzi</i>	
Towards Explainable Artificial Intelligence (XAI) in Supply Chain Management: A Typology and Research Agenda . . . . .	32
<i>Godfrey Mugurusi and Pross Nagitta Oluka</i>	
Distribution of Vaccines During a Pandemic (Covid-19) . . . . .	39
<i>Vignesh Dhanapal and Subhash C. Sarin</i>	

### Blockchain in the Operations and Supply Chain Management

Blockchain-Based Master Data Management in Supply Chains: A Design Science Study . . . . .	51
<i>Jacob Lohmer, Lasse Bohlen, and Rainer Lasch</i>	
Blockchain for Product Authenticity in the Cannabis Supply Chain . . . . .	62
<i>Sven Januszek, Andreas Siegrist, and Torbjørn H. Netland</i>	
A Blockchain-Based Manufacturing Service Composition Architecture for Trust Issues . . . . .	70
<i>Qianhang Lyu, Yunqing Rao, Jiawei Wang, and Peng Qi</i>	
An Approach for Creating a Blockchain Platform for Labeling and Tracing Wines and Spirits . . . . .	81
<i>Sotiris P. Gayialis, Evripidis P. Kechagias, Grigorios D. Konstantakopoulos, Georgios A. Papadopoulos, and Ilias P. Tatsiopoulos</i>	

<b>Blockchain Design for Digital Supply Chain Integration . . . . .</b>	<b>90</b>
<i>Kari Korpela, Petr Novotny, Alevtina Dubovitskay, Tomi Dahlberg, Mika Lammi, and Jukka Hallikas</i>	
 <b>Data-Based Services as Key Enablers for Smart Products, Manufacturing and Assembly</b>	
<b>Customer Order Scheduling in an Additive Manufacturing Environment . . . . .</b>	<b>101</b>
<i>Benedikt Zipfel, Janis S. Neufeld, and Udo Buscher</i>	
<b>A Conceptual Reference Model for Smart Factory Production Data . . . . .</b>	<b>110</b>
<i>Giulia Boniotti, Paola Cocca, Filippo Marciano, Alessandro Marini, Elena Stefana, and Federico Vernuccio</i>	
<b>Generating Synthetic Training Data for Assembly Processes . . . . .</b>	<b>119</b>
<i>Johannes Dümmel, Valentin Kostik, and Jan Oellerich</i>	
<b>Data Acquisition for Energy Efficient Manufacturing: A Systematic Literature Review . . . . .</b>	<b>129</b>
<i>Henry Ekwaro-Osire, Stefan Wiesner, and Klaus-Dieter Thoben</i>	
<b>Review of Factors Influencing Product-Service System Requirements Along the Life Cycle . . . . .</b>	<b>138</b>
<i>Stefan Wiesner and Jannicke Baalsrud Hauge</i>	
 <b>Data-Driven Methods for Supply Chain Optimization</b>	
<b>Data-Driven Solutions for the Newsvendor Problem: A Systematic Literature Review . . . . .</b>	<b>149</b>
<i>Thais de Castro Moraes and Xue-Ming Yuan</i>	
<b>An Information Sharing Framework for Supply Chain Networks: What, When, and How to Share . . . . .</b>	<b>159</b>
<i>Eunji Lee and Stefan Minner</i>	
<b>A Robust Data Driven Approach to Supply Planning . . . . .</b>	<b>169</b>
<i>Benoit Loger, Alexandre Dolgui, Fabien Lehuédé, and Guillaume Massonet</i>	
<b>Responsible Manufacturing with Information Disclosure Under Regulatory Inspections . . . . .</b>	<b>179</b>
<i>Yifan Cao and Bin Shen</i>	
<b>Understanding Supply Chain Visibility Through Experts' Perspective: A Delphi Based Approach . . . . .</b>	<b>189</b>
<i>Tarun Kumar Agrawal, Ravi Kalaiarasan, Jan Olhager, and Magnus Wiktorsson</i>
