HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Climate Data Analysis Tools and Datasets to Support Climate Action

with Climate4Impact 2.0 and icclim 6.1.5

I Impacts of Climate Change

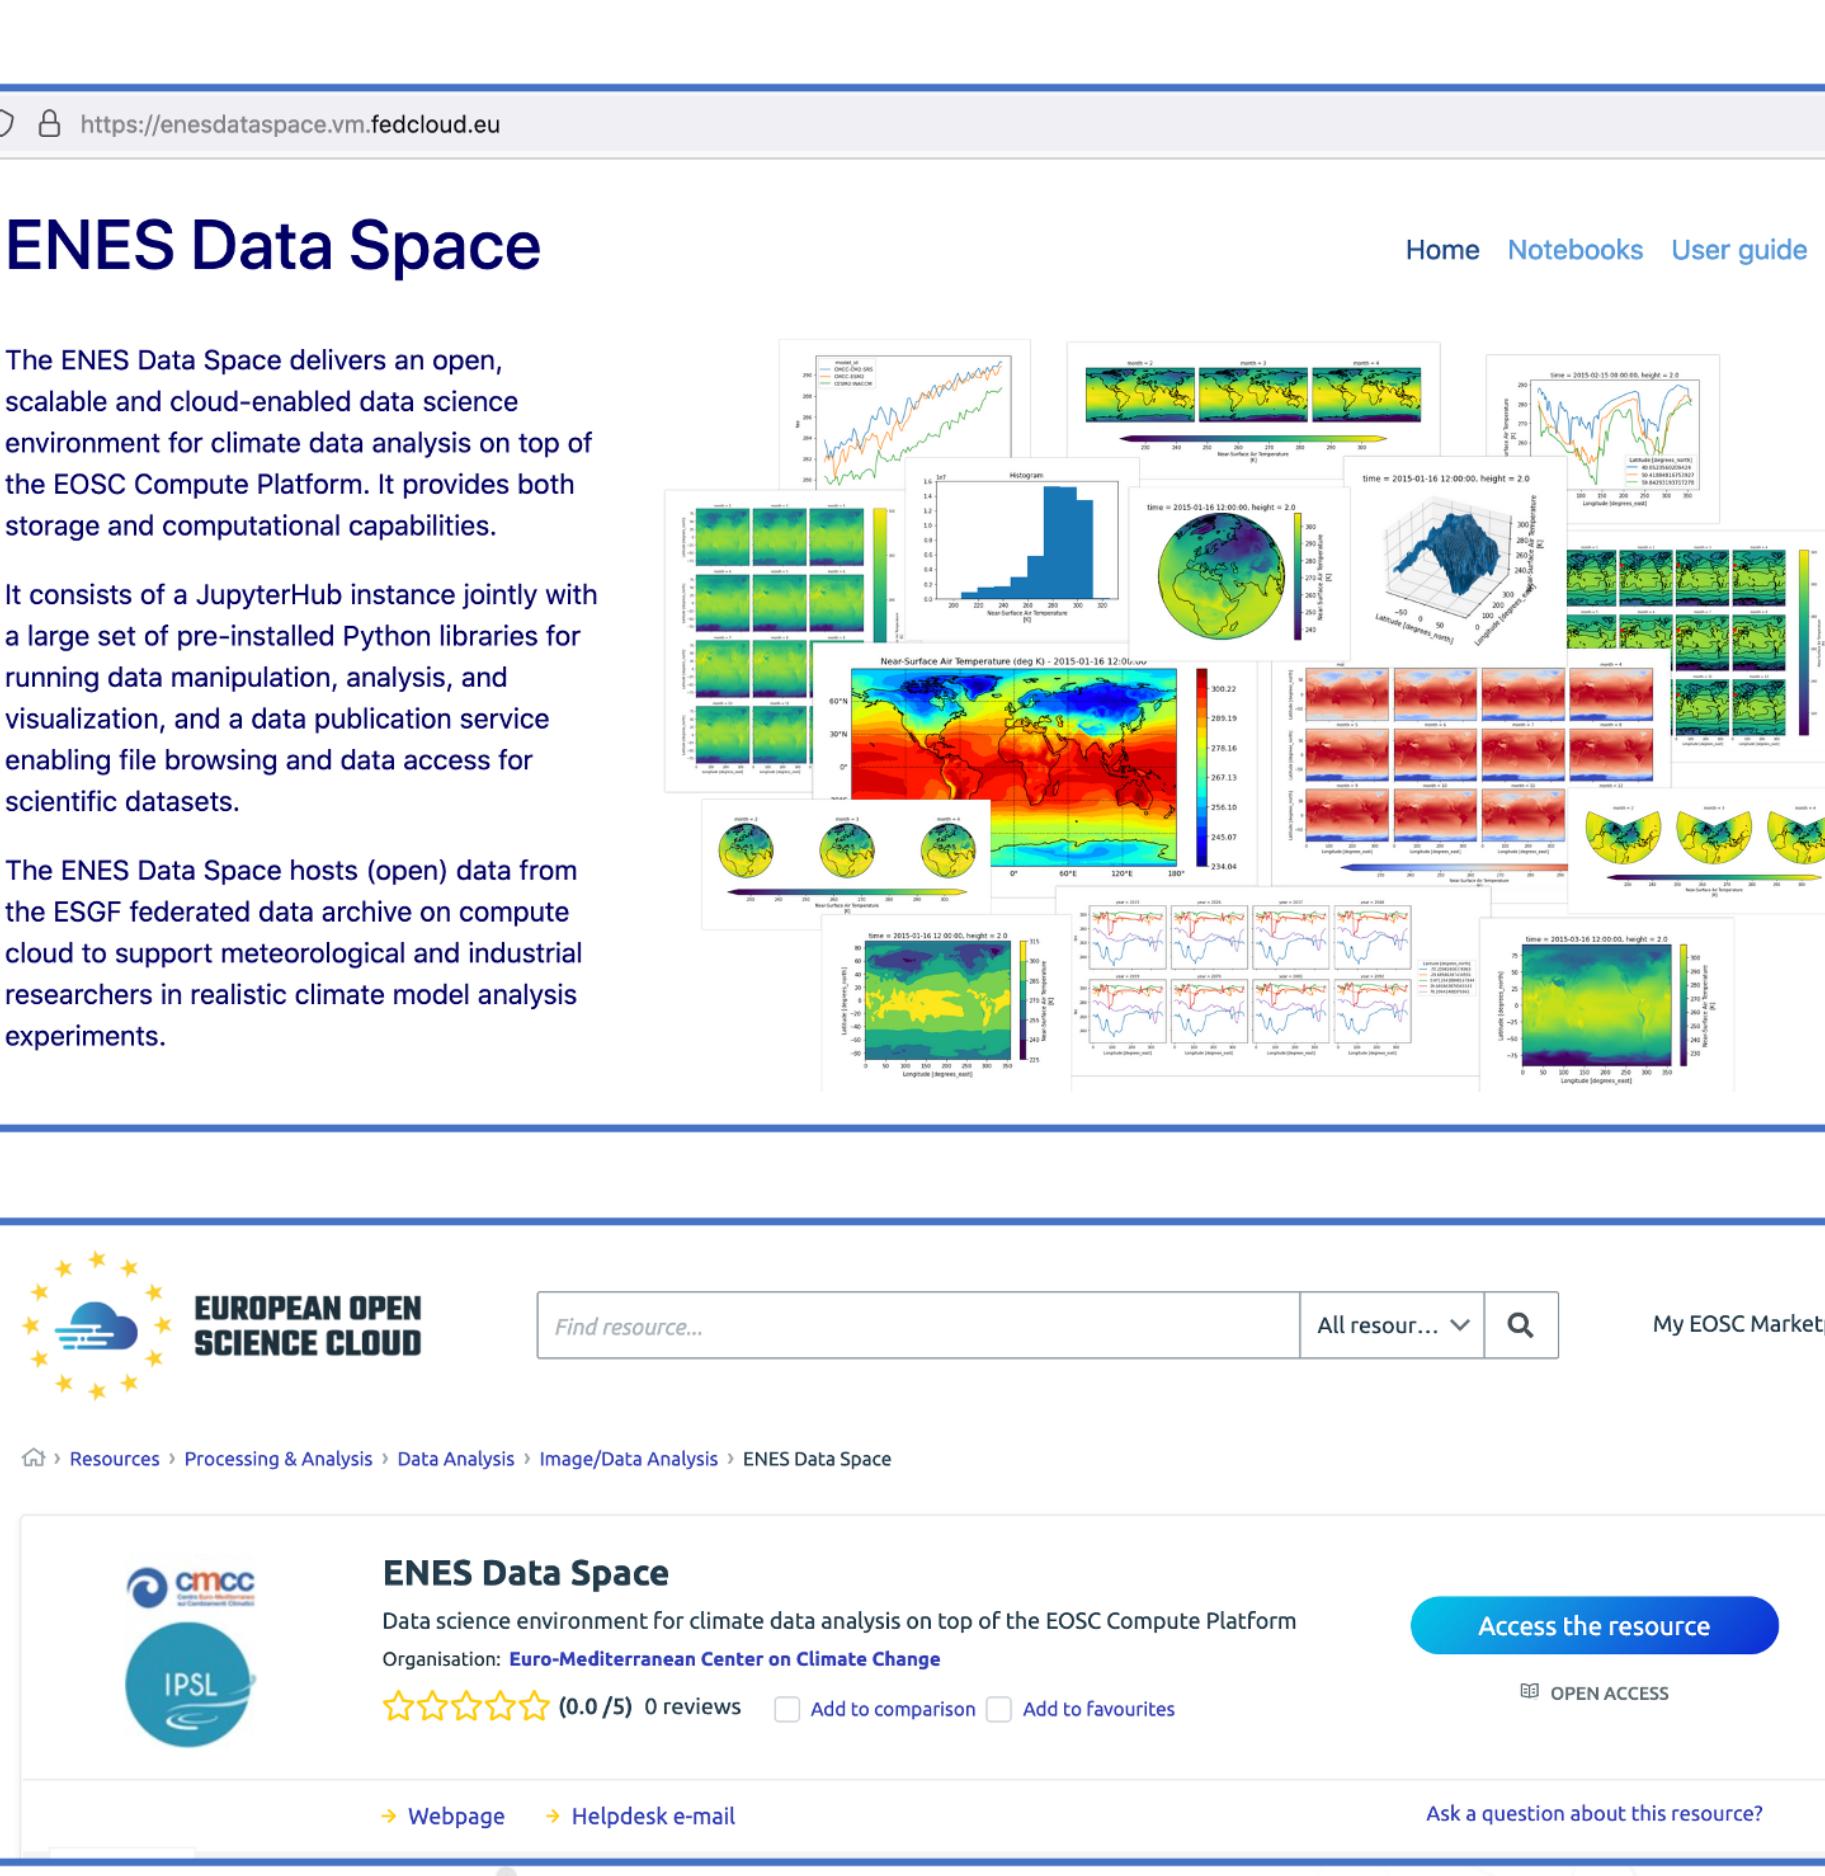

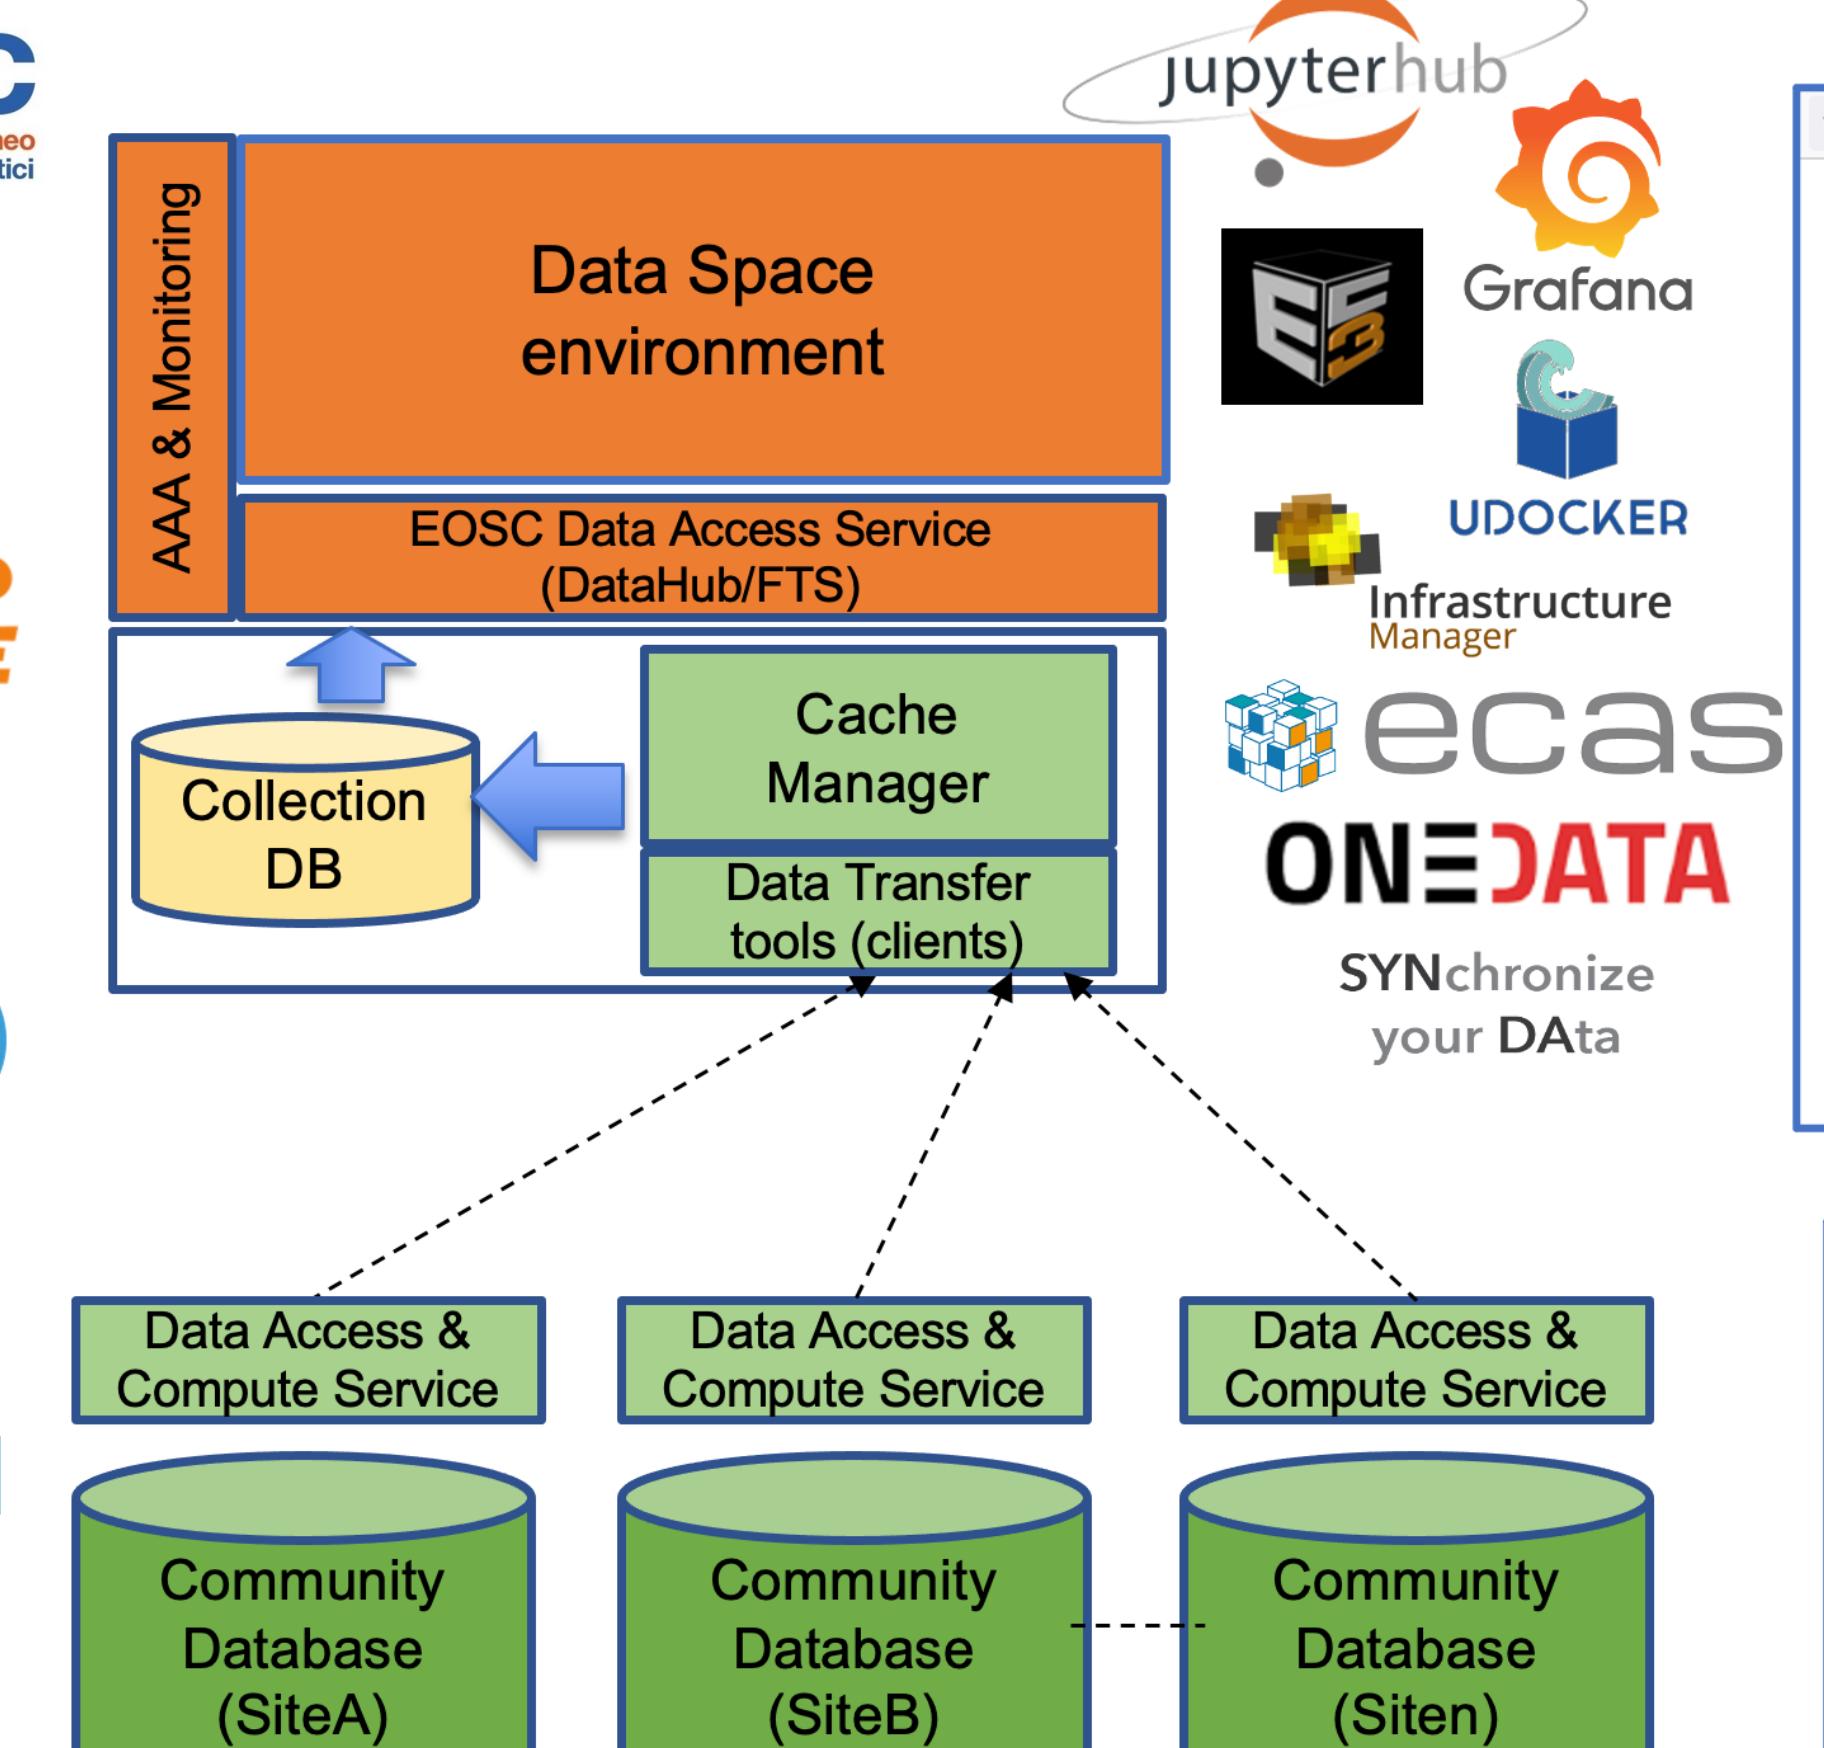

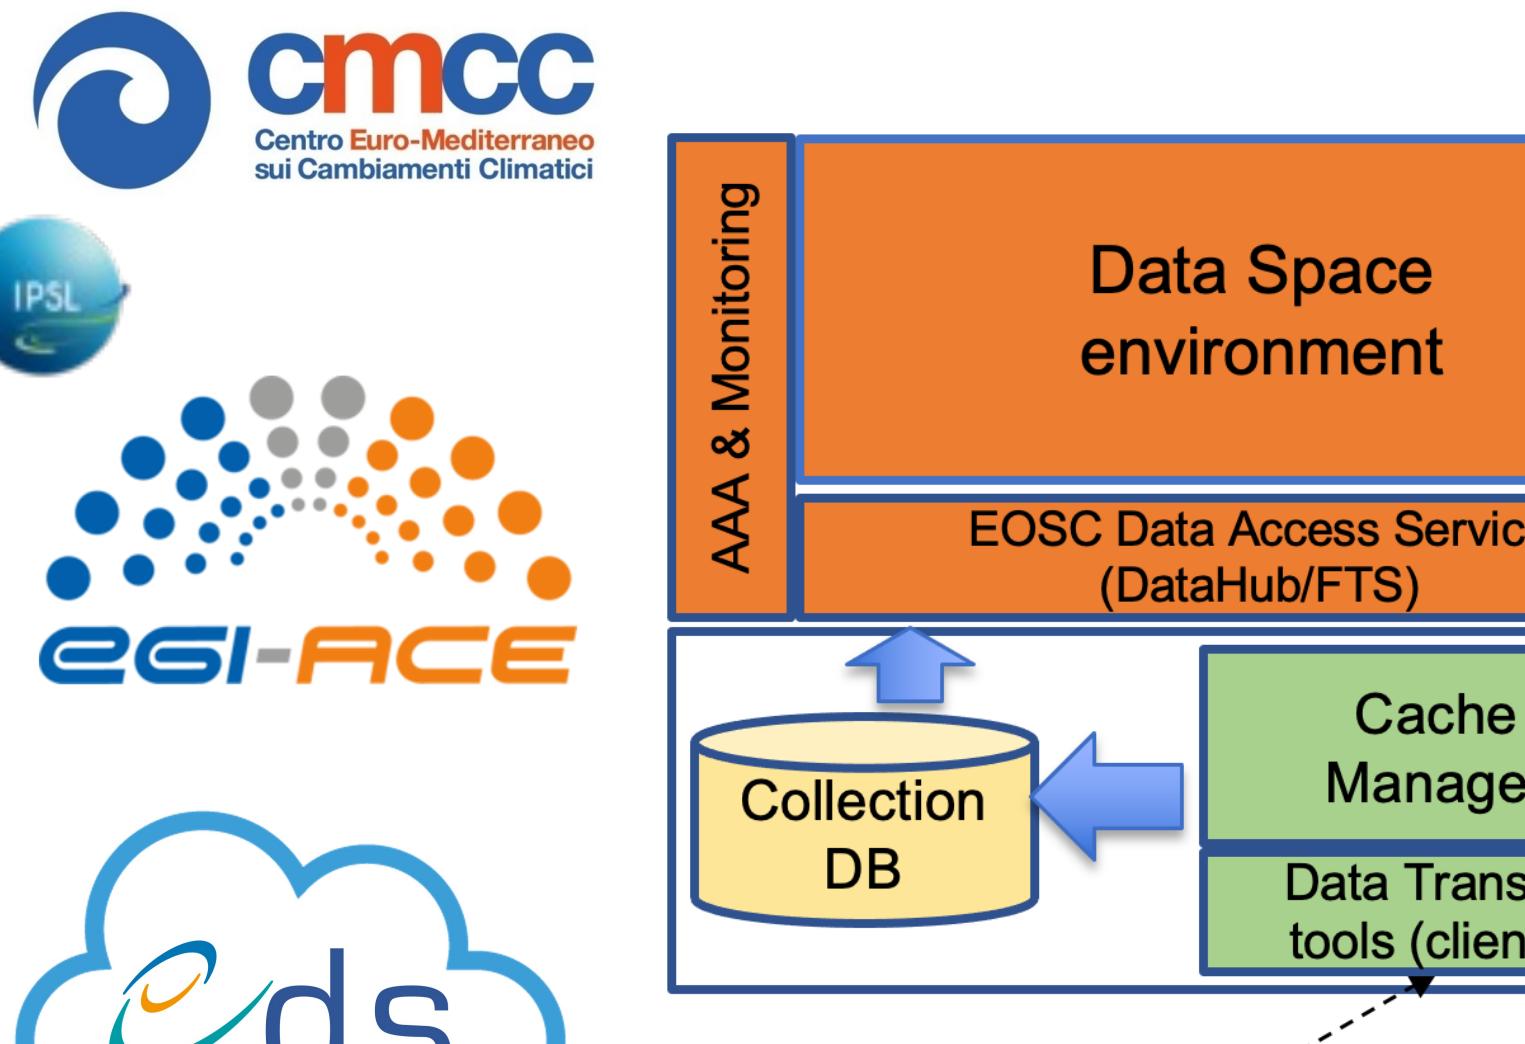

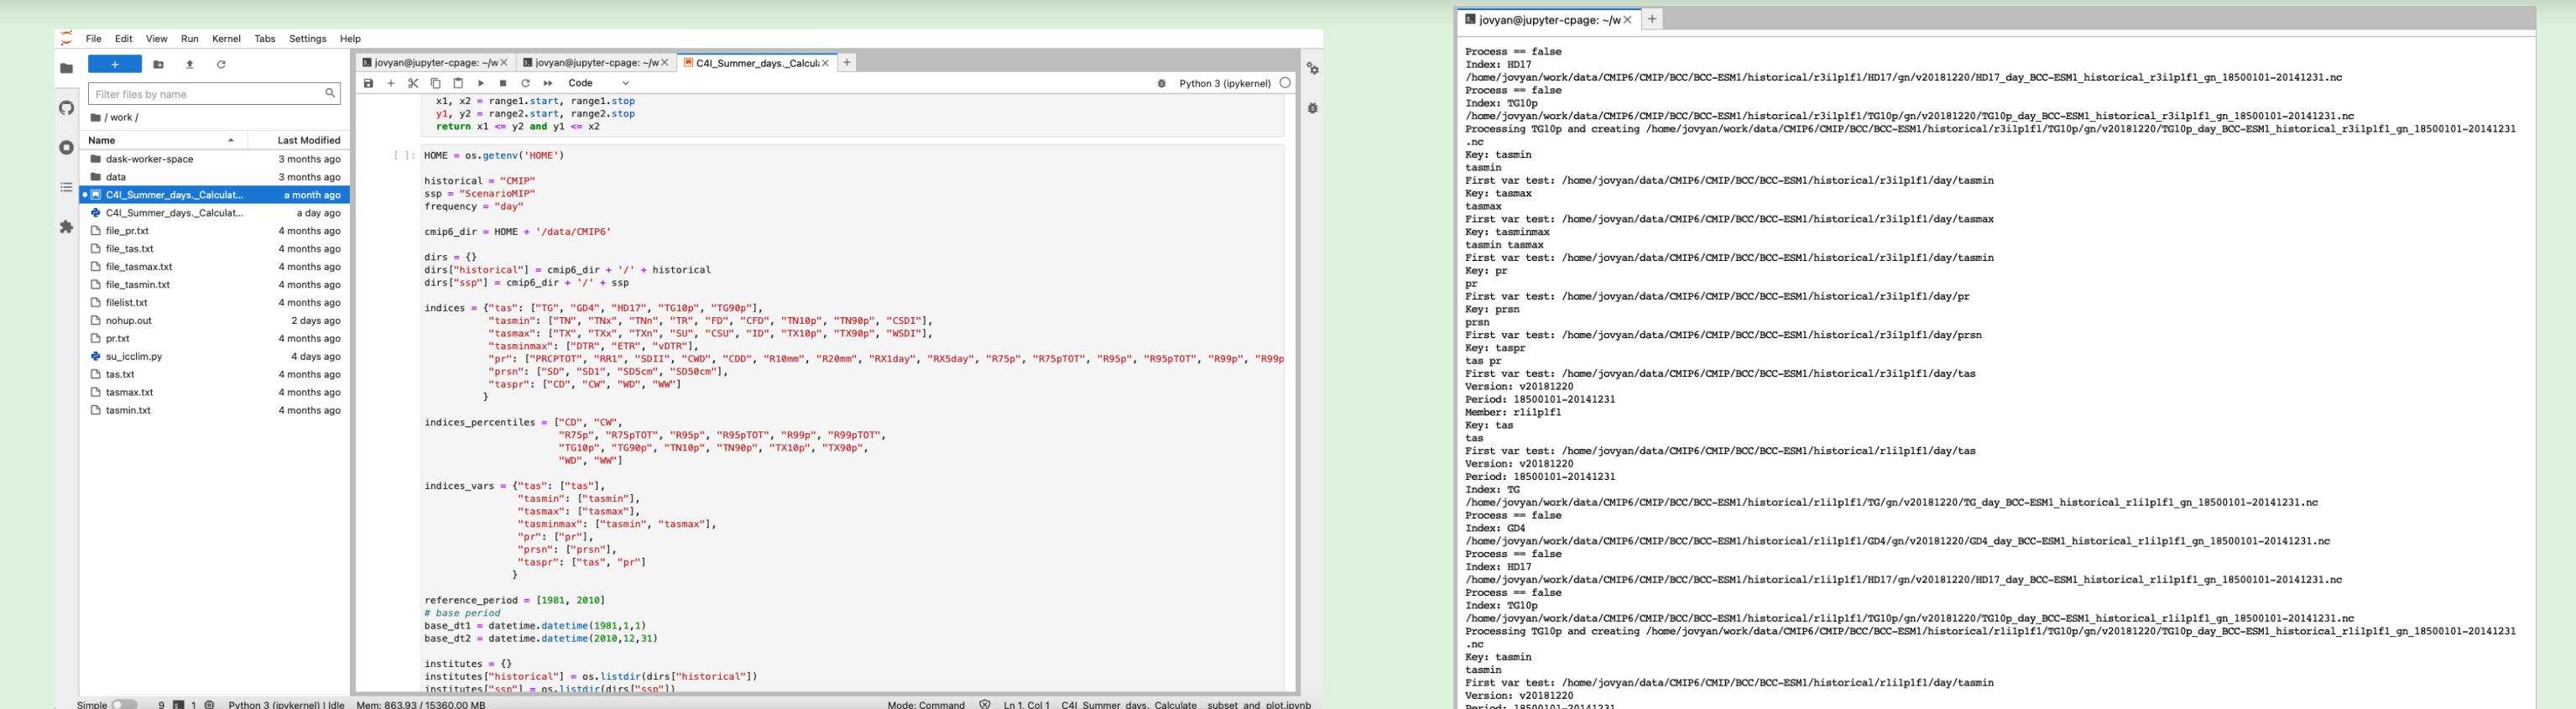

2021 Germany Erftstadt,
southwest of Cologne

2020 Hurricane Delta causes
damage to Louisiana's Gulf Coast

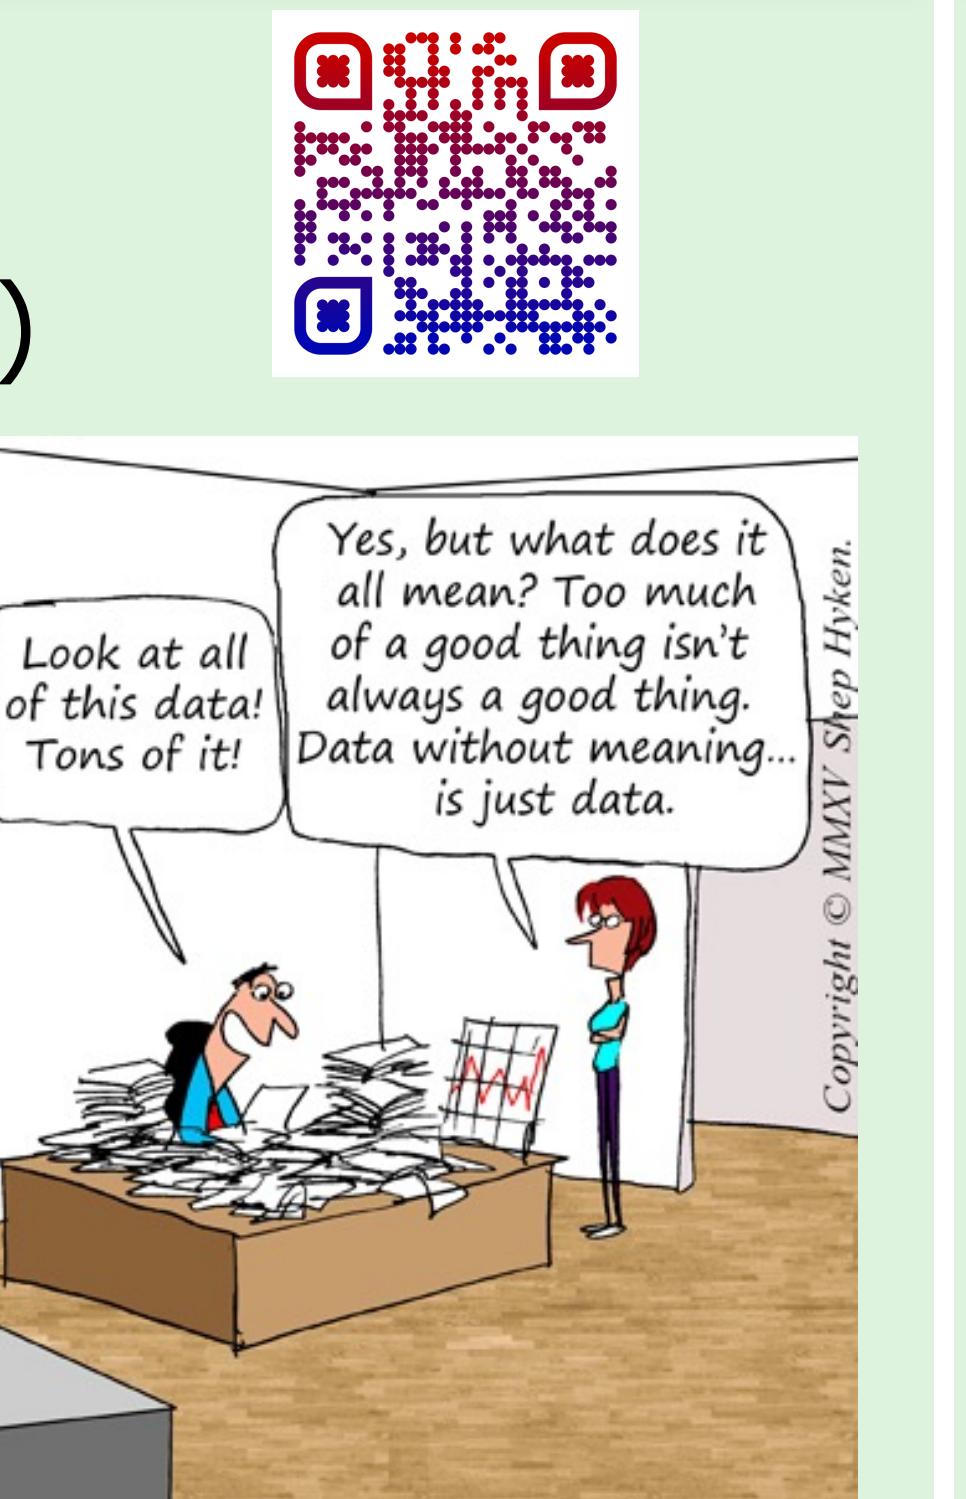

- ▶ Urgent needs of impact assessments
- ▶ Identify mitigation solutions
- ▶ Extreme events attribution
- ▶ Multiple domains: infrastructures, urban, agriculture, transportation, etc.
- ▶ Flexible tools needed for very diverse users
- ▶ **Climate indices and indicators are widely needed**

IV Compute: ENES Data Space

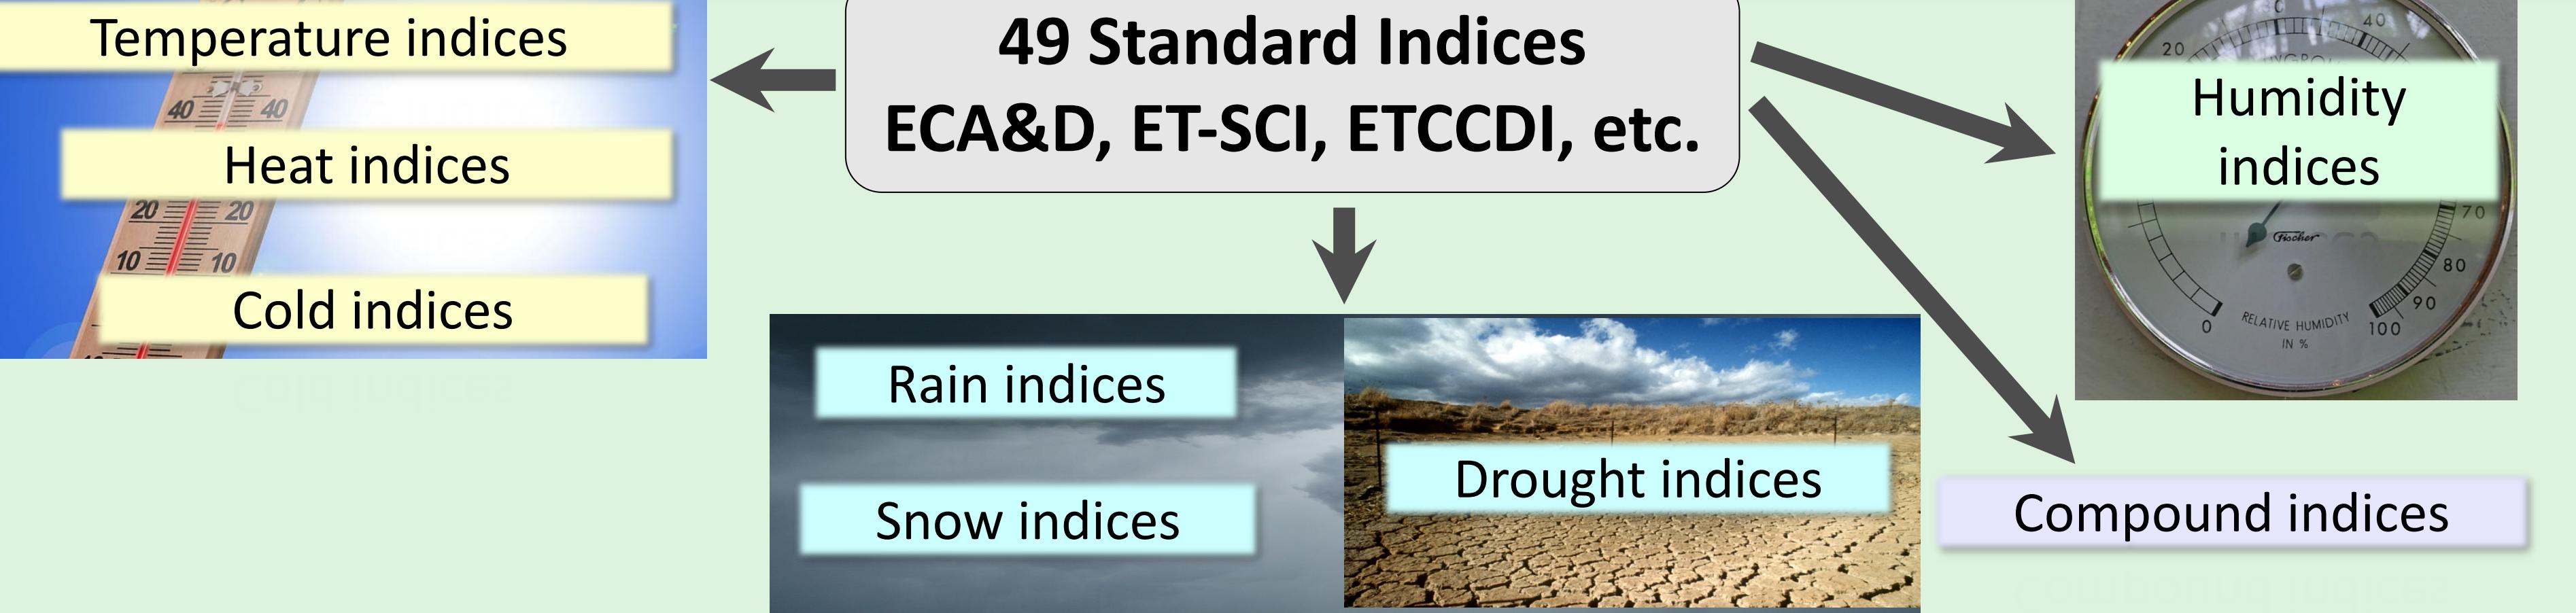

II icclim: Climate Indices

- ▶ Python code developed@CERFACS since 2013
- ▶ Performance optimized (xarray, dask)
- ▶ Fully compliant to CF and Metadata Standards
- ▶ Validated against climact & xclim
- ▶ Easy install: pip install icclim
- ▶ Implement the proper percentile indices calculations when calculation period overlaps reference period: bootstrapping method

III icclim: 50 Standard Climate Indices

- Intra-period extreme temperature range [° C] - **ETR**
- Warm days (days with mean temperature > 90th percentile of daily mean temperature) - **TG90p**
- Summer days (days with max temperature ≥ 25 ° C) - **SU**

Standards for climate indices metadata clix-meta <https://github.com/clix-meta/clix-meta>

```
>>> files = ['tasmax_day_CNRM-CM5_historical_r1i1p1_19950101-19991231.nc', 'tasmax_day_CNRM-CM5_historical_r1i1p1_20000101-20041231.nc', 'tasmax_day_CNRM-CM5_historical_r1i1p1_20050101-20051231.nc']
>>> dt1 = datetime.datetime(1998, 1, 1)
>>> dt2 = datetime.datetime(2005, 12, 31)
>>> out_f = 'SU_JJA_CNRM-CM5_historical_r1i1p1_1998-2005.nc'
# OUTPUT FILE: summer season values of SU
>>> icclim.su(in_files=files, time_range=[dt1, dt2], slice_mode='JJA', out_file=out_f)
```

Take Home Messages

1. Wide Needs for tools to easily calculate climate indices
2. icclim is a flexible, robust and fast python software for calculating climate indices
3. Creating pre-calculated standard indices datasets for CMIP6 is really a need
4. A web platform for easy and FAIR-enabled access to climate data, tools and actionable products is essential

VI Climate Indices Database

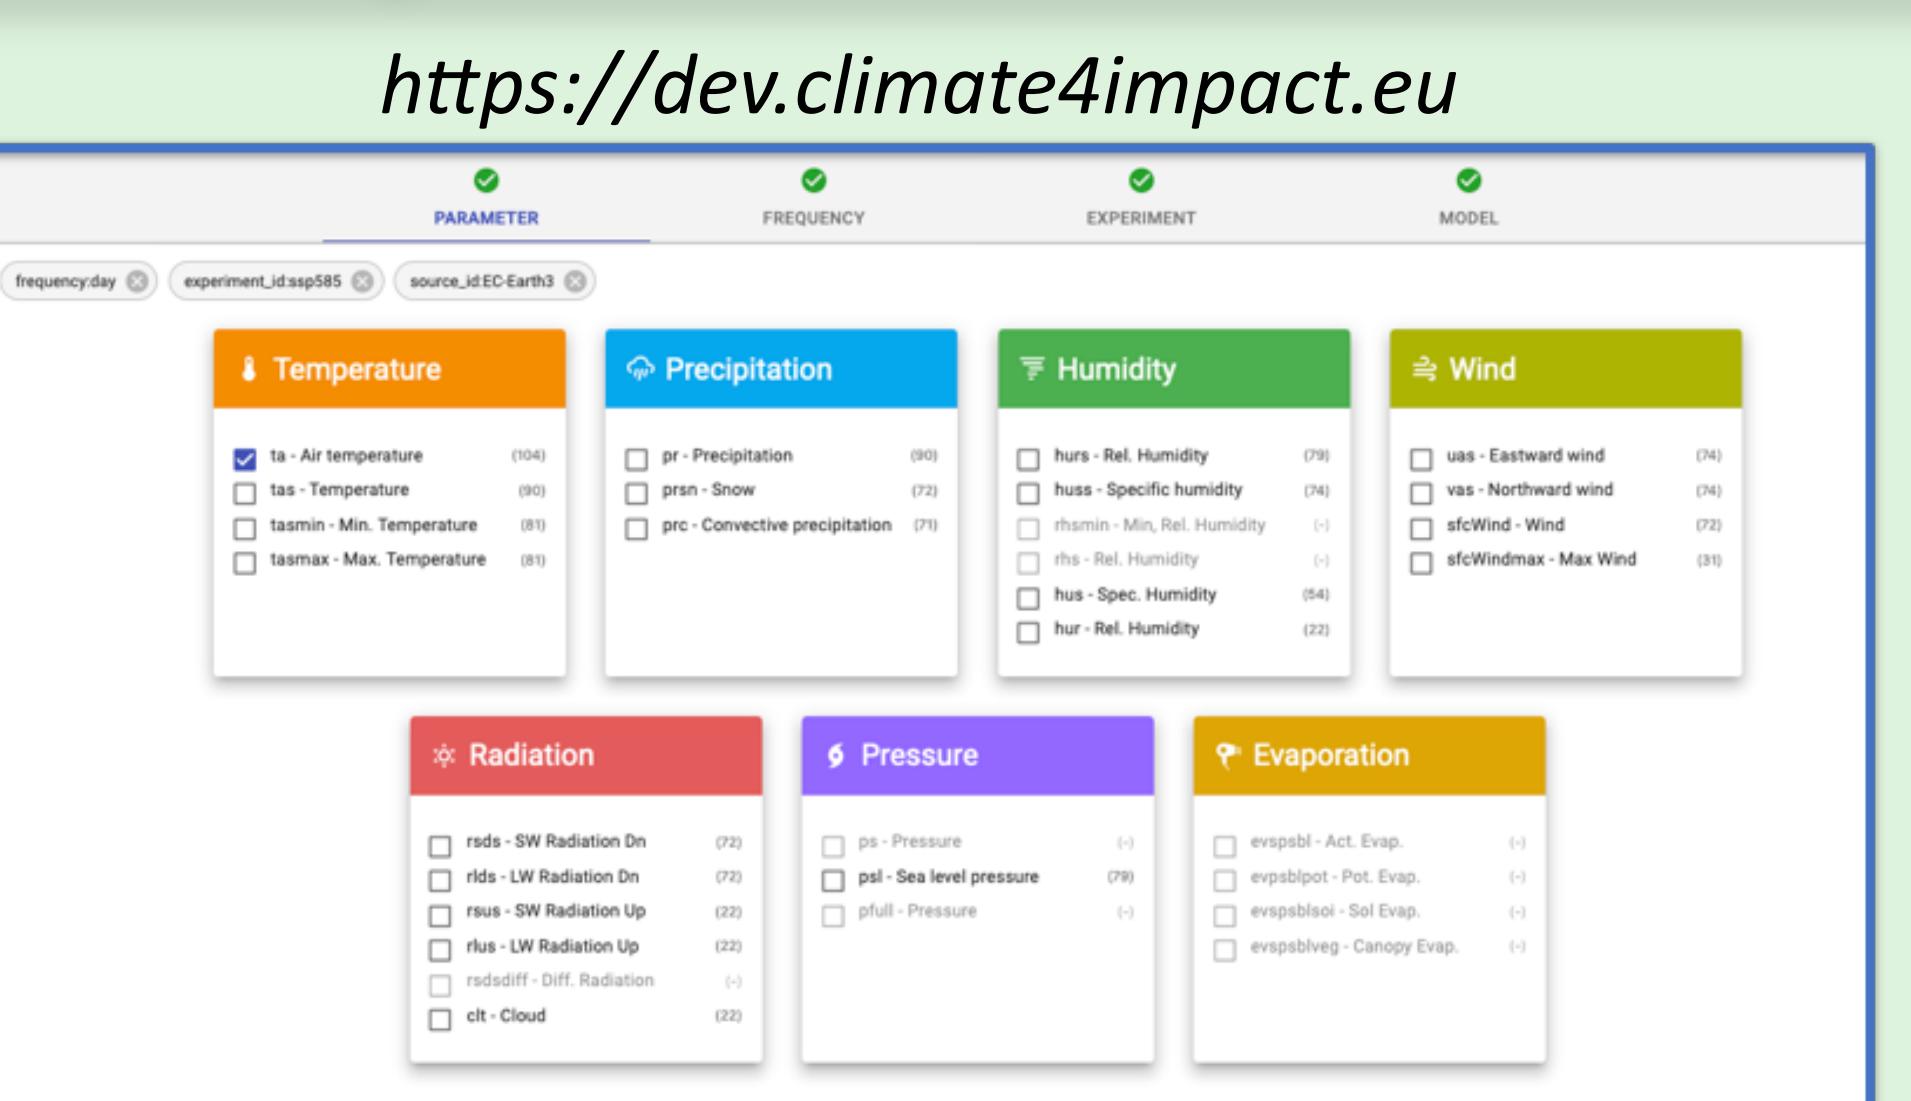

50 standard climate indices over most of CMIP6 simulations

- ▶ Institutes/Climate Models
- ▶ Historical and SSPs
- ▶ Members
- ▶ Versions
- ▶ Time Periods (1850-2100)
- ▶ Can be extended to CORDEX, CMIP5, ERA5, ...

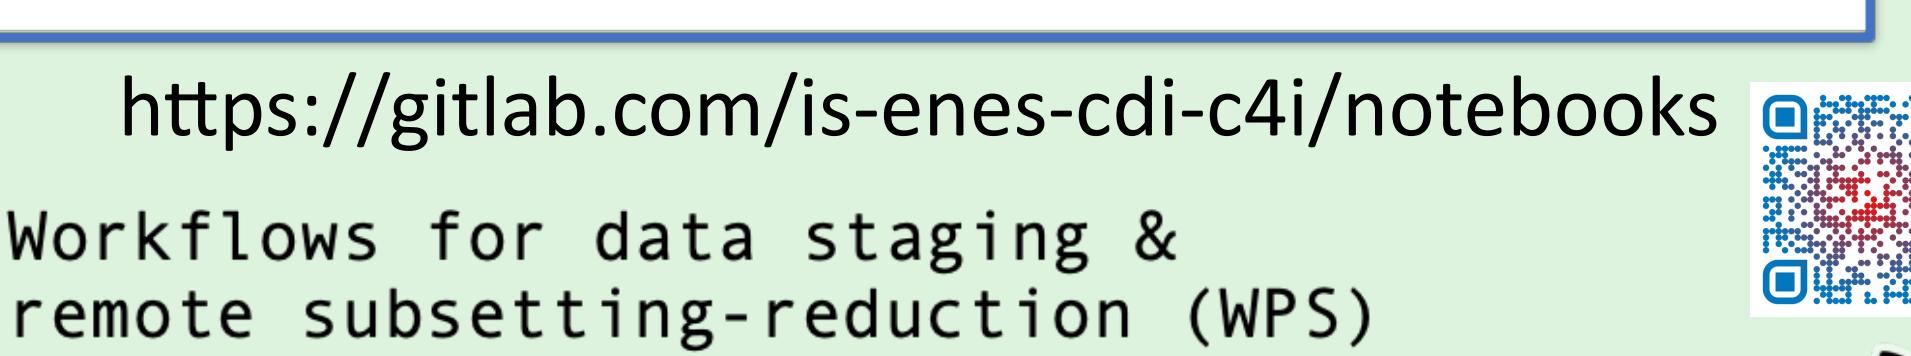

Special thanks to the EGI-ACE and CMCC support!

V Climate4Impact: C4I

- ▶ Front-end to climate data infrastructure (ESGF)
- ▶ Tailored Search Interface with view modes
- ▶ Jupyter-Lab enhanced environment SWIRRL
- ▶ Notebooks gallery
- ▶ Flexible analysis features
- ▶ Climate indices calculation: icclim
- ▶ Personal store for processing outcome
- ▶ Pages for Models Performance Comparison (ESMValTool)
- ▶ Automated reproducibility mechanisms and documentation (Data/Analysis)
